

YARRABEE & CASTLEMAINE STONE

# YORKSHIRE MODULAR

STONE WALL CLADDING

# YORKSHIRE

Yorkshire is a Random Ashlar (modular) natural sandstone product chipped on five sides and sawn on the back, allowing for easy and time-effective installation without compromising on the design result. Yorkshire is perfect for creating a classic and timeless look that adds value and taste to any space. Whether used for retaining walls, garden beds, or feature walls, this natural sandstone product adds flexibility and edge to each design, while enhancing the natural beauty of your surroundings.

<b>Components</b>	Yorkshire comes in flat pieces used for the face surface of the wall and L shaped corner pieces for the corners of the wall
<b>Profile</b>	Walling pieces are random sized rectangles Corner pieces are random sized
<b>Dimensions:</b>	Walling stone is random lengths 200-400mm long x 180-250mm wide. Corner pieces are "L" shaped with one side 100-150mm, a return 200-300mm and a height 150-300mm
<b>Thickness:</b>	20-40mm
<b>Weight:</b>	Walling flats = 70kg per m <sup>2</sup> Corners = 25kg per lineal metre
<b>Quantities:</b>	Walling flats = 10 m <sup>2</sup> per crate Corners = 25 lineal metres per crate
<b>Ordering:</b>	Sold in quantities of 1 square metre or 1 lineal metre lots Note: 1 lineal metre equates to approximately 0.3m <sup>2</sup> of coverage Both walling flats and corners are actively stocked
<b>Note:</b>	If you are installing your stone without using grout joints, we advise adding a minimum of an additional 20-25% to account for any wastage. This will give the installer the flexibility to cut and shape the stone to achieve butt-jointed joints required for this look. Furthermore, we recommend the installer to unpack each crate of stone and utilize a mixture of the sizes provided. Smaller or unused pieces cannot be exchanged for larger ones. It is the installer's responsibility to make use of all the sizes provided.
